
CMSI 4072 Project Status Sheet

Name: Betram Lalusha

Date: 2024/02/19

Project: Visor

Period covered: 2024/01/01-2024/02/19

Accomplishments since last report:

- ❖ Fixed resolve button bug in Visor android
- ❖ Added camera button to let users take picture of unknown item and API call to SERP API to name item in picture taken
- ❖ Implemented resolve and unresolve functionality in Visor Android
- ❖ Fixed checking into place bug hence stopping app from requesting user to check into place after user has declined or accepted to do
- ❖ Added SimilarQuestionsView to enable users to see similar questions to theirs

Scheduled tasks to be done by next report:

- ❖ Implement PlacesWithItemView to enable users to see places that have the item they seek
- ❖ Enable navigation to external websites where users can find the items they seek
- ❖ Add functionality that allows users to view responses to a response
- ❖ Reformat date in posts to show relative timestamps (how long ago from now a post was made) instead of the date the post was made
- ❖ Show count of upvotes/downvotes
- ❖ Implement persistence to prevent unnecessary requests to server

Noteworthy risks, concerns, or problems:

- ❖ Persistence: unsure of how is persistence implemented in Swift and React Native
- ❖ Migration of server from localhost to a remote server accessible from different devices might be challenging
