

Visor

Betram Lalusha

What is Visor?

A question and answer service to help people find whatever they are looking for, wherever it is.

- Visor allows users to ask questions about items they need and view responses to them
- Visor also aims to eventually be able to help users navigate to specific items

Intended audience

Shoppers

Tourists

Anybody looking for specific items inside enclosed buildings that GPS systems cannot see into.

User Point of View

How to use Visor

1. Users Ask Questions about what they need or want
2. Other users respond to the question
3. Users can downvote and upvote questions and responses
4. Users can resolve questions that have been answered

Why I'm interested in Visor

- Improves my skills in fullstack android, web, and iOS development with a shared database
- Critical thinking in Database design and security
- Improves my understanding and ability to implement servers and RESTFUL APIs
- Testing: UI and Unit tests (where necessary)

Tech Stack

- Swift and Swift UI
- JavaScript, React, and React Native
- NodeJs (Express framework)
- Xcode
- VS Code
- PyTorch?
- Firebase/Firestore
- Postman
