
CMSI 4072 Project Status Sheet

Name: Betram Lalusha

Date: 2024/03/05

Project: Visor

Period covered: 2024/03/01-2024/03/05

Accomplishments since last report:

- ❖ Implemented API calls to Google search API to find places with a given item
- ❖ Added PlacesWithItemsView to enable users to see places that have the item they seek
- ❖ Enabled navigation to external websites where users can find the items they seek

Scheduled tasks to be done by next report:

- ❖ Add functionality that allows users to view responses to a response
- ❖ Reformat date in posts to show relative timestamps (how long ago from now a post was made) instead of the date the post was made
- ❖ Show count of upvotes/downvotes
- ❖ Implement persistence to prevent unnecessary requests to server

Noteworthy risks, concerns, or problems:

- ❖ Persistence: unsure of how persistence is implemented in Swift and React Native
- ❖ Migration of server from localhost to a remote server accessible from different devices might be challenging
